

00 - Documentation Index

C3 Contract Control Center

Documentation Index

Version: 2.0.1-alpha

Last Updated: 26 June 2026

Purpose

This document serves as the master index for all C3 Contract Control Center documentation.

It provides a structured overview of the project's product documentation, engineering standards, architecture decisions, validation reports, operational guides, and release history.

All contributors should begin here before exploring individual documents.

Product Documentation

These documents describe what C3 is, why it exists, and where it is heading.

Document	Description
00 - Documentation Index	Master index for all project documentation.
01 - Vision & Product Goals	Product vision, mission, objectives, and long-term direction.
02 - Product Roadmap	Planned evolution of the platform across development phases.
11 - Version 1 Product Completion Audit	Functional completion assessment against the original product vision.
12 - Product Backlog	Prioritized Version 1 feature backlog and future enhancements.

Engineering Documentation

These documents define how C3 is engineered.

Document	Description
03 - Engineering Principles	Engineering philosophy and development standards governing the project.

Architecture Decision Records (ADR)

Architecture Decision Records document significant engineering decisions and their rationale.

ADR	Description
ADR-001	Deployment-Agnostic Architecture
ADR-002	SharePoint Read / Power Automate Write Architecture
ADR-003	Contract Lifecycle Model
ADR-004	Stable Service Contract
ADR-005	Translation Layer Architecture

Future architectural decisions shall continue the ADR numbering sequence.

Validation Reports

Validation Reports verify that implemented functionality behaves as intended.

Current validation includes:

- KPI Definition Validation
- Renewal KPI Semantics
- Renewal Workflow Validation
- Contract ↔ Person Navigation
- Person Relationship Validation
- Contract ↔ Amendment Validation
- Empty State Validation

Future validation reports should follow the existing VAL numbering convention.

Release Documentation

Release documentation records significant platform milestones.

Current releases:

- v2.0.0-alpha

- v2.0.1-alpha

Each release should include:

- Changelog
 - Release Notes
 - Major architectural changes
 - Migration notes (where applicable)
-

Operational Documentation

These documents support deployment and platform operations.

Planned

- Developer Guide
- Production Deployment Guide
- SharePoint Integration Guide
- Power Automate Integration Guide
- Environment Configuration Guide
- Production Runbook

These documents will be created during the production integration phase.

Project Structure

C3 documentation is organized around six primary categories:

Product

Engineering

Architecture Decisions

Validation

Operations

Releases

Each category serves a distinct purpose while collectively providing complete project documentation.

Documentation Principles

All project documentation should follow these principles:

- Documentation evolves alongside the application.
 - Significant architectural decisions require ADRs.
 - Major feature validation should be documented.
 - Release milestones should be recorded.
 - Documentation should prioritize clarity over completeness.
 - Obsolete documentation should be updated rather than duplicated.
-

Current Documentation Status

Category	Status
Product	Complete
Engineering	Complete
Architecture	Complete
Validation	Complete
Releases	Complete
Operations	Planned

Current Project Status

The completion of Version 2.0.1-alpha establishes the architectural foundation of the C3 Contract Control Center.

The project now transitions from architecture and framework development into production integration, operational workflow completion, and deployment.

Guiding Principle

Documentation is considered a core deliverable of the project.

It exists to preserve engineering decisions, reduce onboarding effort, improve maintainability, and ensure the long-term sustainability of the platform.
