

Geekay Intelligence Platform

C3 Deployment Overview v1.0

Purpose

C3 (Contract Control Center) is the first application developed on the Geekay Intelligence Platform.

The objective of this deployment is to host C3 within SharePoint Online using SharePoint Framework (SPFx) while consuming operational data stored in SharePoint Lists.

Current Status

Completed:

- Platform architecture
- Application architecture
- Local development environment
- Runtime hosting model
- SPFx integration

- Deployment package generation

Current Phase:

- SharePoint deployment
 - Live SharePoint data integration
-

SharePoint Requirements

The deployment requires:

- SharePoint Framework (SPFx) support
 - App Catalog deployment permissions
 - Access to the C3 SharePoint site
 - Read and write access to the required SharePoint Lists
-

Authentication

Authentication is provided through the SharePoint user context via SPFx.

No separate Microsoft Entra application registration is currently planned.

Future Direction

C3 is the first application built on the Geekay Intelligence Platform.

The same hosting architecture will be reused for future operational applications across other departments, including HR, Legal, Finance, Logistics, and Operations.

The deployment model has been designed to support future expansion without requiring architectural changes.
