

ADR-003 - Contract Lifecycle Model

Status

Approved

Context

During implementation of C3 Phase 2, the initial React application assumed that ContractStage represented the business state of a contract.

Review of the actual C3_Contracts SharePoint metadata showed that ContractStage and Disposition represent two different concepts.

Failure to distinguish these concepts would create incorrect dashboard metrics, renewal logic, filters, and status badges.

Decision

ContractStage represents workflow state.

Disposition represents business state.

ContractStage

ContractStage tracks where a contract is within the contract processing workflow.

Approved values:

- Draft
- In Review
- Pending Approval
- Pending Signature
- Signed

Disposition

Disposition tracks the operational status of the contract after execution.

Approved values:

- Active
 - Renewing
 - Terminated
 - Archived
-

Examples

Example 1

ContractStage = Signed

Disposition = Active

Meaning:

Contract has been fully executed and is currently active.

Example 2

ContractStage = Signed

Disposition = Renewing

Meaning:

Contract is active and currently undergoing renewal activity.

Example 3

ContractStage = Signed

Disposition = Terminated

Meaning:

Contract was executed previously but has since been terminated.

Impact

The following components must use ContractStage:

- StageBadge
- Workflow reporting
- Approval dashboards
- Contract processing metrics

The following components must use Disposition:

- Renewals Center
- Active contract counts
- Termination reporting
- Contract lifecycle analytics

This distinction is considered a permanent C3 platform rule.
