

## **ADR-006**

### **Title**

Diagnostics as a Platform Capability

Decision:

Diagnostics are a first-class platform capability rather than a temporary development utility.

Principles:

- Every adapter exposes its own metadata.
- Every environment reports its health.
- Diagnostics never contain business logic.
- Platform health is observable without opening developer tools.

That may seem like over-documentation today, but six months from now, when C3 has live SharePoint, Power Automate, notifications, and multiple environments, you'll be glad this was treated as architecture rather than an afterthought.
