

Absolutely. These should read like internal release notes from a software company, documenting the state of the product at each milestone.

Release Notes

v2.0.0-alpha

C3 Contract Control Center

Release Date: 26 June 2026

Status: Internal Alpha

Overview

Version 2.0.0-alpha establishes the architectural foundation of the C3 Contract Control Center.

This release transitions C3 from a collection of functional screens into a structured software platform with clearly defined architectural boundaries, reusable services, centralized business rules, and an intelligence layer.

The primary objective of this release was architectural stability rather than production deployment.

Highlights

Domain Architecture

Completed implementation of the core business domains:

- Contracts
 - People
 - Amendments
 - Renewals
 - Inbox
 - Intelligence
-

Intelligence Platform

Introduced:

- Executive KPIs
- Portfolio analytics
- Renewal analytics
- Operational Insights Engine
- Workflow breakdowns
- Team and game analytics

Business calculations were centralized into reusable intelligence services.

Business Rule Consolidation

Implemented centralized business rule engines for:

- KPI calculations
- Renewal eligibility
- Renewal workload
- Operational insights

Duplicate business logic across screens was eliminated.

Relationship Validation

Validated:

- Contract ↔ Person
 - Contract ↔ Amendment
 - Navigation integrity
 - Empty states
 - Relationship consistency
-

Architecture

Established:

- Layered Architecture

- Service Layer
- Adapter Pattern
- Translation Layer
- Domain DTOs

These architectural decisions are documented through ADR-001 to ADR-005.

Documentation

Created:

- Architecture Overview
 - Engineering Principles
 - Architecture Decision Records
 - Validation Reports
 - Product Roadmap
 - Product Vision
-

Validation

Completed:

- Build verification
 - Lint verification
 - KPI validation
 - Relationship validation
 - Navigation validation
-

Known Limitations

The following capabilities remain outside the scope of this release:

- Live SharePoint integration
- Authentication
- Power Automate write operations

- Production deployment
 - Administrative configuration
 - Document management
 - Activity timeline
-

Overall Assessment

Version 2.0.0-alpha establishes a stable engineering foundation for future production integration.

No major architectural redesign is anticipated before Version 1.0.

Next Milestone

Version 2.0.1-alpha

Focus:

- Engineering documentation
 - Product governance
 - Version 1 planning
 - Release management
 - Project standardization
-
