

Release Notes

v2.0.1-alpha

C3 Contract Control Center

Release Date: 26 June 2026

Status: Internal Alpha

Overview

Version 2.0.1-alpha concludes the architectural planning phase by formalizing the project's engineering standards, documentation framework, product governance, and Version 1 planning.

No significant runtime functionality was introduced during this release.

Instead, the focus shifted toward ensuring the long-term maintainability and sustainability of the platform before production integration begins.

Highlights

Documentation Framework

Completed the official documentation structure for C3.

Introduced:

- Documentation Index
 - Product Vision
 - Product Roadmap
 - Engineering Principles
 - Product Completion Audit
 - Product Backlog
-

Engineering Governance

Established permanent engineering standards through:

- Stable Service Contract
- Translation Layer Architecture

- Engineering Principles

These documents now define the expected development practices for all future work.

Product Planning

Introduced Version 1 planning artifacts including:

- Product Completion Audit
- Product Backlog
- Version 1 Exit Criteria
- Out of Scope for Version 1

This establishes a clear definition of product completion before expanding into future platform capabilities.

Version Control

Initialized Git version control.

Established release tagging strategy.

Current milestones:

- v2.0.0-alpha
 - v2.0.1-alpha
-

Architecture Status

Architecture declared stable.

Major architectural components are considered complete:

- Layered Architecture
- Service Layer
- Adapter Pattern
- Translation Layer
- Intelligence Layer
- Domain Model

Future work is expected to focus primarily on implementation rather than architectural redesign.

Current Project Status

Completed:

- Product architecture
- Core domains
- Intelligence
- Engineering documentation
- Validation
- Release management

In Progress:

- SharePoint integration

Planned:

- Power Automate
 - Authentication
 - SPFx deployment
 - Production hardening
-

Known Limitations

Version 2.0.1-alpha continues to rely on mock data during local development.

Production capabilities such as live SharePoint connectivity and write operations remain scheduled for Phase 3.

Overall Assessment

Version 2.0.1-alpha marks the completion of the architectural phase of the C3 project.

The platform now possesses:

- Stable architecture
- Defined engineering standards

- Comprehensive documentation
- Product governance
- Version planning

The project is ready to transition into production integration.

Next Milestone

Phase 3

Objectives:

- Live SharePoint integration
 - SPFx hosting
 - Authentication
 - Power Automate workflows
 - Production deployment
 - Operational completion
-

One suggestion

From now on, **every tag should have release notes**. Even if a release only contains a handful of changes, maintaining that discipline will give you a complete historical record of how C3 evolved. Looking back at v2.0.0-alpha and v2.0.1-alpha a year from now, you'll immediately understand not just what changed, but why those milestones mattered.
