

The only thing I'd challenge here is the business definition.

Because currently:

Renewal Window = 1

Renewal In Progress = 1

No Action Taken = 1

That means the same contract is simultaneously:

In Progress

AND

No Action Taken

which is impossible.

VAL-001A

I would create one final follow-up:

VAL-001A

Renewals KPI Semantics

Question:

Should this contract:

GKE-PL-2026-003

Disposition = null

7d remaining

be considered:

No Action Taken

or

Renewal In Progress

My answer:

No Action Taken

because no renewal status exists.

Then:

GKE-PL-2026-004

Disposition = Renewing

16d remaining

should count as:

Renewal In Progress

but not No Action Taken.

If we adopt that rule, we'd expect:

Renewal Window 2

Critical $\leq 30d$ 2

Renewal In Progress 1

No Action Taken 1

which feels more natural from an operations perspective.

Agreed. Before VAL-002, let's close **VAL-001A** properly because we've uncovered a business-rule problem, not a code problem.

Looking at your Renewals Center screenshot:

Renewal Window 1

Critical $\leq 30d$ 1

Renewal In Progress 1

No Action Taken 1

But the screen itself shows:

7 Days

GKE-PL-2026-003

Disposition = null

30 Days

GKE-PL-2026-004

Disposition = Renewing

That means there are actually **2 contracts inside the renewal process**:

GKE-PL-2026-003

7d remaining

No disposition

GKE-PL-2026-004

16d remaining

Renewing

So from an operations perspective I'd formally approve:

Renewal Window

DaysToExpiry <= 90

AND

Not Archived

AND

Not Terminated

Expected:

2

Critical ≤30d

DaysToExpiry <= 30

AND

Not Archived

AND

Not Terminated

Expected:

2

Renewal In Progress

Disposition = Renewing

Expected:

1

No Action Taken

Inside Renewal Window

AND

Disposition != Renewing

Expected:

1

That gives:

Renewal Window 2

Critical ≤30d 2

Renewal In Progress 1

No Action Taken 1

Which tells a much better story:

Two contracts require renewal attention.

One is being worked.

One is not.

That's exactly the sort of KPI an Operations Manager would care about.

Proposed VAL-001A Resolution

Current behavior: FAIL

Reason:

Renewal Window excludes contracts with Disposition = Renewing

which makes the KPI underreport actual renewal workload.

Approved behavior:

Renewal Window includes:

- Active
- Renewing
- Null disposition

Excludes:

- Archived
- Terminated

If you agree with that business rule, next step is not coding immediately.

First tell me:

Yes, Renewal Window should represent all contracts requiring renewal management, including contracts already in renewal.

If yes, we'll update the helper once and close VAL-001A correctly. Then we move into VAL-002 relationship testing.
